## **ABSTRACT**

This project is a web based online mobile shopping system. Payment gateway is providing this system to purchase the products (Online payment or cash on delivery). The main objective of the System is to manage the details of Customers, Stock, Mobile Details, Payment, Seller and Delivery agent. This System provides customers to find new versions of mobiles their brands and its warranty details. System can be able to accept user request and manages information like Mobile's as well as the Reviews about the products. System provides the facility of customer to add a product into Cart. Admin can add, delete and update the records of sells, payment and brands. The customer gets the proper information about the mobile store. Admin provide the products the products brand, price, model, release date, camera space, memory space and extended warranty of the product to customers. Customer, Admin, Seller and Delivery agent have different login. This Software helps Customers to find different mobiles, their features and new updates. User-Friendly prompts are provided for user. Attractive and catch Graphical & Photographic Interfaces are used for user interaction. Strong management system controls are used easy Navigation is provided for maintaining proper flow of system. This system computerizes all data is storing all data of the Mobiles Sales, Customer Details, Seller Details. To provide various report facility. Cost effective and less manpower required. There are a few things you can do to ensure you are buying from a reputable source. The first thing you should do is check out the customer reviews of the online mobile store. This will give you an idea of the quality of the products they sell and the level of customer service they provide. If there are a lot of negative reviews, you may want to avoid that store. Another thing you can do is to contact the Better Business Bureau and see if there have been any complaints filed against the store. This is a good way to find out if the store is reputable and if they are likely to provide you with good customer service.

## **PROJECT SPECIFICATION**

This Proposed system provides customers to find new versions of mobiles their brands and it is a web application through which shops can sell a variety of products and the customers can buy the available products.

Some of the core modules are:

- Customer
- Admin
- Seller
- Delivery Agent

### **• Customer**

Customers will register themselves first and then only can search for mobiles in the applications. Once a registered customers logs in, he or she will have access to search for mobiles and add them to cart and buy it.

### **• Admin**

Admin will basically manage the product that is being added to the website. Admin will approve customers before they log in and search their mobiles as per their criteria they are looking for. Admin will also manage the profiles related to sellers who will register themselves in the mobile online shopping and show their mobiles for sale.

### **• Seller**

Sellers basically have to register first and once approved by admin will be able to add their products and details. It will also show all feature information in details. They will provide information related to delivery and also make sure to deliver the product with 100 percent guarantee.

### **• Delivery Agent**

Deliver variety of items to different addresses and through different routes. Follow routes and time schedule. In delivery person module an admin can assign deliveries of orders according to the route of particular delivery person and can see the live status of the order providing by the delivery person at the real time. Admin can easily check the status of all out for delivery order and the delivery person can manage all of their delivery's status and update the status at real time.
